EXPERIENCE

Staff Kotlin Multiplatform (KMP) Software Engineer

Apr 2024–Present

Philo — *Live TV streaming (vMVPD), cable alternative; ~1M paying subscribers plus millions of free users*

- Tech lead for a KMP business-logic library used by 10+ engineers across 9 client apps (Android, Apple, JS); grew library adoption from 25% to 100% of client business logic in one year, cutting app-parity time by >50%.
- Diagnosed a monolithic versioning system breaking features across all 9 client teams on every upgrade; led a 2-month migration to a modular architecture and developed framework for maintaining backwards compatibility.
- Identified ad beacon request issues with client side ad blockers and implemented a server-side beacon firing redundancy feature that lifted beacon success rates by 3% or ~\$2M increase in annual ad revenue.
- Leads cross-functional design reviews (product, design, client, backend); interviews engineering candidates.
- Founding member of the Philo AI Working Group: organized demo events that grew agentic-tool adoption from 20% to 90% of engineering; built the team's AI infrastructure, custom MCP servers, agent configs, and skills.

Head of Engineering

Oct 2023–Present (nights & weekends)

BarTopTV — *3-person startup building the bar/restaurant retail media network; 1000+ devices across Los Angeles & Charlotte*

- Lead for all engineering: custom Android HW/AOSP, NestJS backend, ReactJS dashboard, Expo mobile clients.
- Identified desktop-only tools as a barrier for bar owners; built the BarTopTV Play app for content creation.
- Owned device-fleet reliability end-to-end, built remote monitoring and OTA tooling that kept devices always bootable and never bricked, with local failover keeping venues live through AWS outages (revenue-critical).
- Identified interactive, analytics-backed ads as the top monetization lever through self-directed operator research; shipped via a custom PrebidJS wrapper, driving 10x per-venue revenue and 5→100+ venue growth.

Senior Software Engineer, Electronics R&D

Jan 2023–Apr 2024

Sonance — *Established audio/amplifier manufacturer*

- Partnered with sales to understand real-world device-servicing and control requirements; identified needs that ruled out off-the-shelf tools, and designed a custom OTA pipeline on AWS guaranteeing zero-brick updates.
- Independently closed a device-auth gap outside project scope, building a custom SSH Certificate Authority and artifact-signing pipeline on AWS KMS to secure the update pipeline end-to-end while allowing authorized connection.

Senior Embedded Engineer

Jul 2018–Nov 2022

Orro — *VC-backed smart-home startup based in San Mateo, CA (Menlo Ventures and others); ~20 employees, joined pre-Series A*

- Developed a Java/Kotlin multiplatform library and app for core feature implementation (lighting controls, Orro REST and PubSub APIs, and OTA process) for custom Android and Linux HW devices.
- Built custom Yocto Linux OS and AOSP (drivers, U-Boot, SensorHAL, JNI) and led firmware architecture across PIC16/Cortex M0–M7/PSoC processors for lighting, sensing, and OTA update flows.
- On-call engineer for FW/SW issues; implemented dual boot architecture for 100% OTA success across 4 processors.
- With 2 weeks to initial launch, diagnosed and resolved a critical factory-reset defect on-site in Malaysia after standard fixes failed, avoiding a schedule slip that risked program funding.
- PM for Orro S, aligning eng, QA, CM under competing priorities; mentored FW engineers, interviewed candidates.

RECENT PROJECTS

- **TeeTimeCaddy** (Compose Multiplatform, Supabase) · **SparkLocal** (SwiftUI, Bonjour/WebSocket)
- **BeaconFound** (QR-tag lost-and-found, Supabase/React) · **WagerLeagueBets** (fantasy sports, Supabase/React)

SKILLS

Languages/Platforms: Kotlin, Compose UI, Python, Java, TypeScript/React, C/C++, Swift/SwiftUI

Cloud/Infra: AWS (Lambda, API Gateway, RDS, DynamoDB, VPC, KMS, ECS), NestJS, Docker, Jenkins, GH Actions

Embedded/Systems: Yocto, U-Boot, firmware (PIC16, Cortex M0/M4/M7, Cypress PSoC), AOSP

EDUCATION

University of Wisconsin–Madison — M.S. Electrical Engineering

May 2016

University of Notre Dame — B.S. Electrical Engineering

May 2014
